Exploring Reconfigurability in Wireless Networks

Dr. Linda Doyle
Department of Electronic & Electrical Engineering
Trinity College

Thursday, April 28th, 2005

Abstract
The talk will focus on reconfigurability in wireless networks. Work based on adaptive ad hoc networks and reconfigurable radio will be presented in order to provide a rich picture of reconfigurability options and possibilities in wireless networks.

Of particular interest are networks that are distributed and disaggregated. In distributed and disaggregated networks, network-wide reconfiguration, if indeed possible, will not be achieved through a co-ordinating or controlling entity as a godlike view or god-like control of the network does not exist.

Therefore mechanisms for facilitating global network-wide reconfiguration based on local knowledge only are needed. Novel techniques for achieving network wide consensus will therefore also be discussed.

Venue: Seminar Room, Hamilton Institute, Rye Hall, NUI Maynooth
Time: 1.00 - 2.00pm (followed by tea/coffee)
Travel directions are available at www.hamilton.ie
